PROFESSIONAL SUMMARY

I am a BS Artificial Intelligence student with a strong foundation in software development and experience building applications involving machine learning, computer vision, and automation. I have worked on real-time systems, backend development, and model deployments which has helped me understand how software performs in practical environments. I am interested in applying my skills to embedded systems and building efficient, reliable solutions.

KEY SKILLS

ML & AI (Scikit-learn, Model Development, Supervised/Unsupervised Learning) | Deep Learning (TensorFlow/Keras, CNNs) | Computer Vision (OpenCV, Image Processing, Real-time Detection) | Agentic AI (LangGraph) | Programming (Python, Java, C++) | Backend (FastAPI, REST APIs, Microservices) | Databases (PostgreSQL, MySQL, Firebase) | Tools & Platforms (Git, Docker, Google Cloud, Firebase)

TECHNICAL SKILLS

Data Preprocessing | Model Training & Evaluation | Feature Engineering | Agentic AI Architectures | Problem Solving | Debugging | System Design | Performance Optimization | Version Control (Git)

WORK EXPERIENCE

AI Engineer (Intern) | Security General Insurance | Lahore (On-Site) — Jun 2025 – Aug 2025

- Developed an automated client registration system using an agentic AI workflow, capable of parsing and understanding client emails in multiple formats.
- Integrated IMAP and SMTP protocols to read incoming emails, generate intelligent responses, and automate communication processes.
- Designed logic to differentiate between individual and corporate clients, enabling tailored data extraction and processing workflows.
- Automated underwriting steps and follow-up interactions to handle incomplete information, improving overall efficiency and response time.

AI Engineer | CodAgentic | Lahore (Remote) — Feb 2025 – Aug 2025

- Developed a RAG-based system for automated exam question generation using structured academic datasets.
- Processed and transformed raw data into embeddings for efficient semantic search and retrieval.
- Integrated vector database retrieval with LLM-based generation to produce contextually relevant and diverse questions.

Full Stack Engineer | SportSpot | USA (Remote) — Sep 2024 – Jan 2025

- Developed a full-stack web application for SportSpot, integrating third-party APIs to enhance user functionality and interactivity.
- Designed and implemented a robust backend using microservices architecture, ensuring high concurrency handling and system stability.
- Optimized database queries and managed efficient data transport to improve performance across the platform.
- Built RESTful APIs and client interfaces for seamless consumption of external services.
- Implemented server-side logic and services using Python and FastAPI, ensuring scalable and maintainable code.

Freelance

- Diabetes Prediction System: Developed a machine learning model to predict diabetes risk using patient health data, implementing feature selection and model evaluation for accurate predictions.
- Fake News Detection using BERT: Built a natural language processing pipeline leveraging BERT to classify news articles as real or fake, achieving high accuracy through fine-tuning and preprocessing techniques.
- PropFinder: Developed an Android property marketplace app with integrated backend services, enabling users to browse, search, and filter listings efficiently with real-time data updates.
- American Sign Language (ASL) Recognition: Built a computer vision system using TensorFlow/Keras and OpenCV to recognize ASL hand gestures in real time, enabling accurate and responsive gesture detection for communication applications.

EDUCATION & CERTIFICATIONS

BACHELOR'S DEGREE | Artificial Intelligence Majors | Comsats University Islamabad, Lahore Campus — 2023 – 2027 (expected)
INTERMEDIATE | Pre Engr. | Government College University, Lahore — 2020 – 2022
CERTIFICATIONS | CB3 e-Learning
